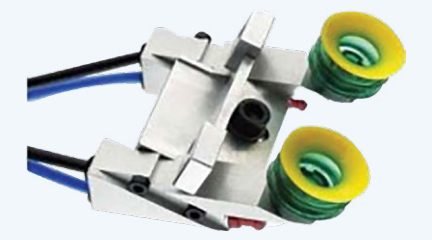
PERFECT BINDING

VERDEN, GERMANY



Gatherer/Winjector Technology

Signatures or individual sheets are horizontally loaded, at a 25 degree angle, for a faster path to the line chain, where they are transported upright on the spine. Our Winjector technology uses compressed air to generate customized vacuum control. This technology eliminates vacuum pumps while reducing machine noise levels, energy consumption and maintenance. On average, each feeder can be makereadied in two to three minutes.

Single Pass Gatefolded Books

With our patented VSS Foredge Trimming process, gatefolded products can be completed in a single pass. Whether purchased separately or in combination, our “Roll Away” KRF Cover Folder Feeder can score gatefolded product inline, while all product inputs are adjusted through the Navigator touch screen.

Spine Preparation

Dual Spine Prep is standard on our Quickbinder, and City models. The Vento series offers a third prep station. After the milling section – within all three models – the use of a multi-knife head opens up the spine’s fibers in a more effective way than a notching head. The result is a stronger “page pull” test of the finished book.
